

Agenda:

- Django models
- ORM
- Admin
- Django shell.

What is ORM

ORM: object relational mapping

'select * from Products' 
change
Products.objects.all() 

class animal:

name ←

id

age

name

abc

animal(abc, 1, 30)

①
③⑤

Animal

id	name	age
1	abc	10
2	def	11
3	geh	12

class animal

name

age

id

<Animal> a = Animal.objects.all()

3 objects

print(a[0].name)
